

Turn your old, or not so old,
**Mac in to a
MACSERVER**

You don't need a Xserve nor Mac OS X Server...
Your "ordinary" Macintosh can easily become;

- ➔ a video security system
- ➔ a home automation server
- ➔ a telephone answering machine
- ➔ a complete BBS messaging system
- ➔ a web, ftp, proxy & email server
- ➔ an audio & video streaming server

**plus tools to control and monitor
your server remotely are included**

The applications supplied on this CD are supplied as is and we make no representations regarding the applications or any information related thereto. Any questions, complaints or claims regarding the applications must be directed to the appropriate software vendor.

Various different license types apply. Some titles require further payment direct to the application publisher to enable the full feature sets and functions. Some functions require additional hardware and/or software to be installed first.

MACSERVER

Net

Abyss Web Server

Abyss Web Server enables you to host your Web sites on your computer. It supports secure SSL/TLS connections (HTTPS) as well as a wide range of Web technologies. It can also run advanced PHP, Perl, Python, ASP, ASP.NET, and Ruby on Rails Web applications which can be backed by databases such as MySQL, SQLite, MS SQL Server, MS Access, or Oracle.

ASAPH

Asaph is a micro-blogging system, focusing on collecting links and images from other pages. It allows you post content directly from any page you are on. Asaph is not a full blown blog and it does not aim to be one - it just does this one task, but it's pretty good at it.

Chyrrp

Chyrrp is a blogging engine designed to be very lightweight while retaining functionality. It is driven by PHP and MySQL (with some AJAX thrown in), and has a pimpin' theme and module engine, so you can personalize it however you want.

Dynamic DNS

Dynamic DNS (DDNS) allows you to create a hostname that points to your dynamic IP or static IP address or URL. Also provided is an update mechanism which makes the hostname work with your dynamic IP address.

EIMS

Eudora Internet Mail Server (EIMS) 3.3 is the latest version of the popular Internet mail server for Macintosh. If you need to handle email for a dozen users, or thousands of users, EIMS is a reliable and easy to use solution.

Kerio WebSTAR

Kerio WebSTAR is an easy-to-use web server for Mac OS X that helps small companies run Internet and intranet websites and integrate them with databases.

mamp

The abbreviation MAMP stands for: Macintosh, Apache, Mysql and PHP. With just a few mouse-clicks, you can install Apache, PHP and MySQL for Mac OS X ! MAMP installs a local server environment in a matter of seconds on your Mac OS X computer, be it PowerBook or iMac and is installed in the typical Mac fashion: very easily. MAMP will not compromise any existing Apache installation already running with your OS X.

You can install Apache, PHP and MySQL without starting a script or having to change any configuration files!

NotMac

The notMac application allows users to replicate .Mac services locally on their own machine, or server. The server is OS neutral, while the client is OS X specific.

Papaya

Papaya is a web server for Mac OS X dedicated to sharing your files with others. Sharing files is now incredibly quick and easy ! It's a matter of dragging files to Papaya's dock icon, or the library list. The web address for downloading the file is copied automatically, ready for pasting into an e-mail or instant message.

Pure-FTPd

Pure-FTPd is a free (BSD), secure, production-quality and standard-conformant FTP server. It doesn't provide useless bells and whistles, but focuses on efficiency and ease of use. It provides simple answers to common needs, plus unique

useful features for personal users as well as hosting providers.

SquidMan

SquidMan is a MacOS X graphical installer and manager for the Squid proxy cache. It is designed to operate as a "personal" proxy server. When you run Squid on a MacOS X computer, it can: cache downloaded content, reducing network traffic and improving browsing performance on slow links; act as a proxy server for other computers on your subnet and restore the operation of some MacOS X 10.2 system services that normally fail through authenticated proxy servers, such as Software Update

sshhelper

Secure Shell Helper does the following: Control who's allowed to access your account; Generate new OpenSSH keys; View/Export your public keys; Setup and control the SSH server and Easy to use Wizard allows you to configure the server and personal identity. Secure Shell helper alleviates the need to use the command line to configure a working OpenSSH system. It's all point and click !

WaterRoof

WaterRoof is an IPFW firewall frontend for Mac OS X with a easy interface and many options. Features include dynamic rules, bandwidth management, NAT configuration and port redirection, pre-defined rule sets and a wizard for easy configuration. You can also watch logs and graphic statistics. Rules configurations and network options can be saved and optionally activated at boot time. With WaterRoof setting up a dual-homed firewall with Mac OS X has never been so easy.

MACSERVER

Telco

Asterisk

Asterisk is the world's leading open source PBXi, telephony engine, and telephony applications toolkit. Offering flexibility unheard of in the world of proprietary communications, Asterisk empowers developers and integrators to create advanced communication solutions...for free.

PageSender

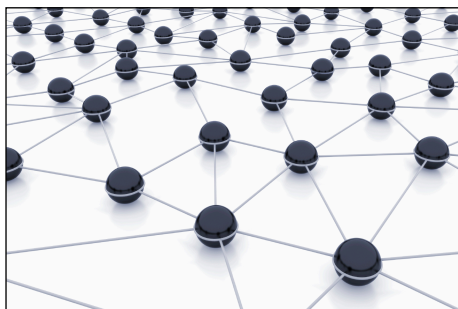

With PageSender, fax or E-mail anything you can print. Use the built-in PageSender Fax Center to manage and automate your fax activities.

phlink

As a voicemail system, Ovolab Phlink plays a greeting and records voicemail messages, keeping them on your Mac for later playback. Phlink's features enhance your productivity: using talking caller ID, network caller ID, call screening functions and multiple voice mailboxes, you can take only the calls that are important for you, letting Phlink handle the rest!

PhoneValetHome

PhoneValet Home Edition is an intelligent telephone assistant that incorporates all of the features a busy family could want to organize their calls ! Personal mailboxes; Messages Emailed; Calls screened; End junk calls; Talking Caller ID; No message limits; Ring tones; Calling Card Dialing

Media

Allegro Media Server

The Allegro Media Server streams digital music from iTunes libraries to wired or wireless networked digital music players using UPnP technology. This means that networked UPnP-based Digital Music Players such as the Philips Streamium series, the Roku SoundBridge products and the NETGEAR MP 101 can see an iTunes Digital Music Library over the network and play individual songs or playlists.

KavaTunes

KavaTunes creates interactive websites that look and work just like iTunes. Browse, search and play all your music. KavaTunes websites can stream your favorite playlists using your computer's built-in web server. KavaTunes can also add artwork to your music.

Nicecast

Nicecast is the easiest way to broadcast music from OS X. Broadcast to the world, or just across your house. Nicecast can help you create your own internet radio station or allow you to listen to your iTunes Music Library from anywhere in the world!

On Air

On Air is a virtual radio studio (or DJ mixer) for your Macintosh!

Collaboration

FirstClass Server

The FirstClass Collaboration Suite is a fully integrated suite of applications designed to enhance communication, collaboration, and knowledge sharing within education and corporate environments. FirstClass takes communication capabilities well

beyond standard groupware solutions by integrating a powerful set of features and applications for online collaboration, learning, content sharing and publishing.

Openfire

Openfire (formerly Wildfire) is a real time collaboration (RTC) server. It uses the only widely adopted open protocol for instant messaging, XMPP (also called Jabber). Openfire is incredibly easy to setup and administer, but offers rock-solid security and performance.

Spark

Spark is an Open Source, cross-platform IM client optimized for businesses and organizations. It features built-in support for group chat, telephony integration, and strong security. It also offers a great end-user experience with features like in-line spell checking, group chat room bookmarks, and tabbed conversations. Combined with the Openfire server, Spark is the easiest and best alternative to using un-secure public IM networks.

WiredServer

Wired Server contains everything you need to easily set up your own server. It comes in two different distributions: Wired Server for Mac OS X and Wired Server for Unix. Wired Server for Mac OS X is designed to take advantage of Mac OS X technologies like Bonjour, and handles Finder aliases transparently. Aside from the regular Wired Server, this package also contains an easy-to-use System Preference panel for GUI configuration.

MACSERVER

Other

EvoCam

EvoCam is the ultimate webcam software for Mac OS X. Use EvoCam to publish a webcam with streaming video, view and record video from network cameras and video servers, create timelapse movies, or use it as part of your home security system with its configurable motion sensors - these are just a few of the things you can do with this easy-to-use yet incredibly powerful webcam software!

Indigo

Indigo is an intelligent home control server that integrates an assortment of home control hardware modules to provide unprecedented control of your home. Indigo's built-in Web server and client/server architecture give you control and access to your home remotely from other Macs, PCs, internet tablets, PDAs, and mobile phones (including the iPhone and iPod Touch). Save money, conserve water, and reduce electrical usage by automating your home with Indigo's unlimited scheduling and control logic.

keycamx

KeyCamX is simple and effective home video surveillance and webcam software for Macintosh. It can record images simultaneously from multiple cameras compatible with your Mac, for example internal or external iSight, mini DV camcorder, or any USB and FireWire video devices. You can choose to store taken Jpeg images on your Mac, .Mac iDisk or FTP server with automatic removal of old recordings. It features smart motion detection with pre-alarm buffer for recording images of what happened before actual triggering event. There are many

options for making audible alarms with embedded or custom sound effects, sending emails, starting custom AppleScript files or executing Unix shell scripts.

Admin

Core

Lithium Core is the front-and-center application for monitoring all aspects of your network. Console provides a graphically rich interactive environment for you to view monitoring telemetry on your devices, analyze incident reports and interact with Lithium's built-in case management system. Console also includes innovative features such as MultiGraph, Virtual Rack and State Scene to help you visualize critical monitoring data.

Chicken of the VNC

Chicken of the VNC is a VNC client for Mac OS X. A VNC client allows one to display and interact with a remote computer screen. In other words, you can use Chicken of the VNC to interact with a remote computer as though it's right next to you.

fseventer

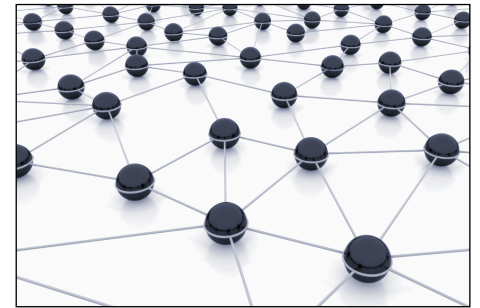

Observes filesystem changes using the same underlying API as Spotlight; Provides a graphical representation of the file activity; Example use could be to determine what files are changed via software installation, preferences, etc

HamachiX

HamachiX is the frontend for Mac OS X to hamachi, a secure mediated VPN client. This allows to create virtual private networks between many clients through firewalls in most cases

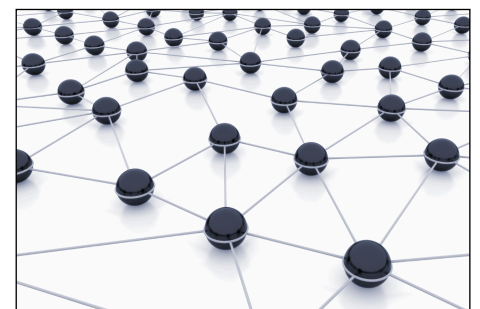

Vine

Vine Server is VNC software that is offered for free by Redstone that you can run on any computer that you want to be able to access remotely. Whether that is the computer right in front of you or the other side of the world, remote connectivity is made easy with Vine Server. Some of the ways that it can be used include: Helpdesk, education, remote system administration, telecommuting and family technical support, to name a few.
